Dear San Franciscan:

The terrible lesson of Hiroshima and Nagasaki is even more devastatingly clear today than when those cities were blasted to ruins by atomic bombs in World War II. Now, underground in silos, and undersea in submarines, there are thousands more nuclear warheads in silent readiness around the world. And all are megatons more powerful than those fateful bombs in 1945. The bombs dropped then may have ended a war.

Those launched today would not result in peace but the end of civilized life as we know it. The lesson that still burns from the ruins of those two Japanese cities is that the obliteration there would be world-wide today. There would be no victory, but a holocaust.

The warheads have become so powerful, the missiles so unerringly precise, the stockpiles of them in the United States and in the Soviet Union so enormous that nuclear war truly is beyond reason. Only panic or insanity could incite one, for there could be no military consequence for one side beyond suicide for both.

This booklet matter-of-factly, from the most reliable data available, estimates the horror if a nuclear weapon fell on San Francisco. The information is not meant to frighten, but to demonstrate the futility of nuclear war.

The continued stockpiling of more and more nuclear weapons by our country and the Soviet Union merely gives added impetus to war as the only resolution to the long confrontation between the two nations. Stockpiling intensifies distrust and detracts from diplomatic initiatives. It unbalances the economies in the two super-powers, fueling and diverting funds in both nations from housing, industrial development, environmental quality, health care and other urgent needs.

This booklet is being published with funds appropriated by the Board of Supervisors, in the firm belief that all San Franciscans should have the basic facts on which to make an informed judgement on the full implication of a nuclear attack on the City.

I urge you to thoroughly review this booklet and seriously consider the information contained therein.

Sincerely,

A handwritten signature in black ink, appearing to read "Dianne Feinstein".
Dianne Feinstein

Why Should I Read This Booklet?

This booklet is about something unpleasant and frightening: nuclear war and the death and destruction of all that you treasure. The danger is real. The risks are great. You should read this booklet to learn what is at stake. Then you can decide what you wish to do about it.

Why Did the Mayor and Board of Supervisors Endorse and Distribute This Booklet?

The Mayor and Board of Supervisors of San Francisco are responsible for the public safety of our citizens. It is the duty of these elected officials to inform the people of any imminent danger and to take steps to prevent harm from occurring. In March of 1981, Mayor Feinstein issued a proclamation calling for a "temporary suspension of nuclear weapons production, while seeking a permanent, international nuclear weapons ban." The Board of Supervisors later passed a resolution embodying a similar request. In May of 1982 the Board of Supervisors passed legislation calling for a bilateral verifiable "nuclear freeze." This legislation was also signed by the Mayor. This booklet is a community service in keeping with the beliefs and obligations of the Mayor and the Board of Supervisors.

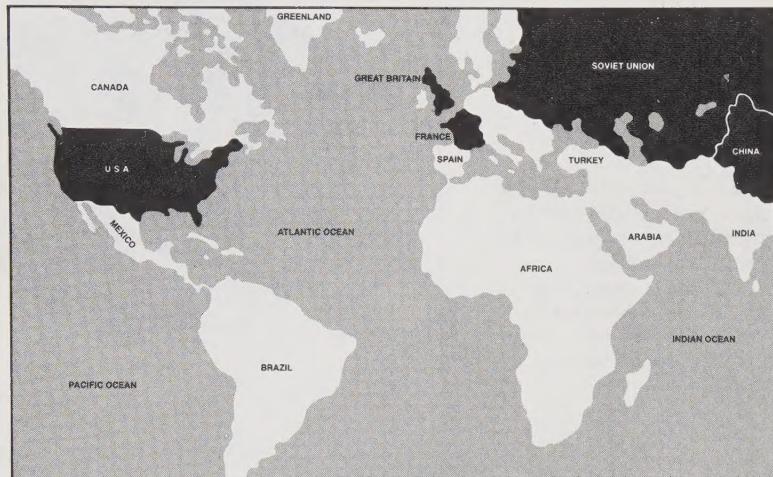

What This Booklet Describes

The rest of this booklet is in five parts. The *first section* outlines who has or might get nuclear weapons, how many there are, and how powerful those weapons can be. The *second part* describes what would happen if a single nuclear weapon were to strike our City. The effects of a full-scale nuclear attack are described in *part three*. There are other, longer range, effects of a nuclear war which can only be guessed at. We have the power to prevent such things from happening; the *last two sections* talk about what we can do.

Nuclear Weapons: How Many? How Powerful?

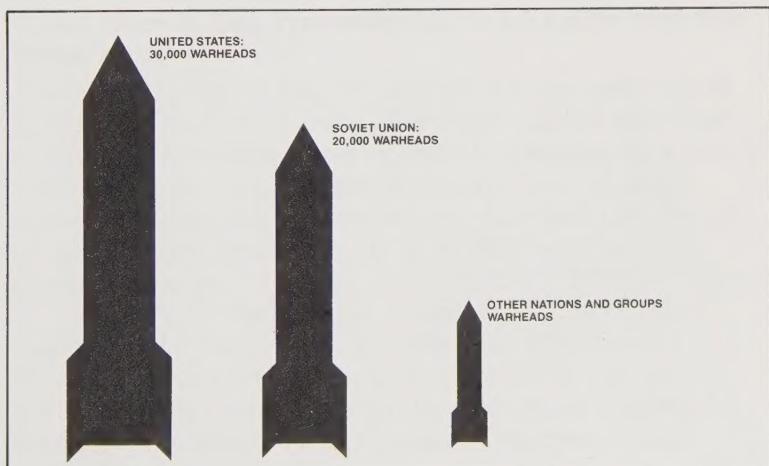

The United States and Soviet Union have the most weapons. France, Great Britain and China have them as well. India, Pakistan, Israel, South Africa and other nations are trying to get them or may already have them.

The United States, the Soviet Union, Great Britain, France and China (all shown in black) are known to have nuclear weapons. Many other nations (shown in white) have the technology necessary to build nuclear devices.

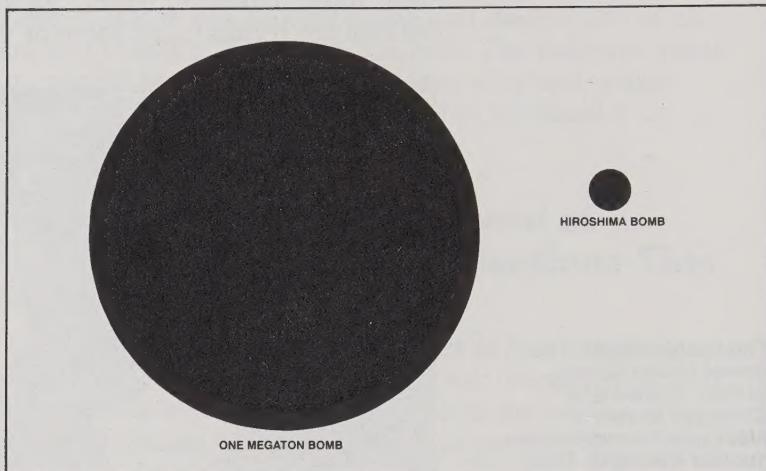

The United States has about 30,000 nuclear warheads; the Soviet Union has approximately 20,000. Both the U.S. and the U.S.S.R. can hit each other with nuclear weapons carried by missiles launched from land or sea or air.

Nuclear warheads are stockpiled by the United States, the Soviet Union, and other nations.

Each nuclear warhead is, of course, extremely powerful. The explosive power of a bomb or warhead is measured in "megatons." One megaton equals a *million* tons of TNT. The bombs which destroyed the Japanese cities of Hiroshima and Nagasaki had the explosive power of "only" 10 to 20 *thousand* tons of TNT. So, a one-megaton bomb — the size of the kind which could hit San Francisco — is 50 to 100 times more powerful.

A one-megaton bomb (large circle) has about 70 times the explosive power of the bomb dropped on Hiroshima (small circle). 75,000 people were killed and more than 100,000 injured by the Hiroshima bomb.

The United States and Soviet Union have nuclear weapons ranging in size up to 20 megatons. If used, all these weapons would produce nearly a *million* times the explosive power used against Hiroshima. Thus, if a nuclear war were started — by accident or on purpose — the destruction would be beyond anything ever before experienced by the human race. The following sections describe what would happen.

2

Suppose A One-Megaton Bomb Were Exploded Near Ground Level At San Francisco City Hall

Based on Radiiuses from the Center Core, Up to 1.5 Miles — (Measuring from Center of White Dot). Next 1.5 to -5 Miles and Beyond.

If you were in San Francisco (0.0 to 1.5 miles from the bomb blast)

Almost every child, every woman and every man would be killed. The Civic Center, the Opera House and most of the elderly housing nearby would disappear as a crater 20 stories deep was formed. A deadly cloud of radioactive soil would be thrown thousands of feet into the air while the blast created winds up to 500 mph. Nothing recognizable would remain from the Old Mint on Mission to St. Mary's Cathedral and Japantown. Little of significance would remain standing from the Mission and Potrero Districts on the south, to Russian Hill on the north, from the Panhandle on the west to the Financial District and Chinatown on the east. This destruction would occur in seconds.

If you were farther away from City Hall (1.5 to 5.0 miles from the bomb blast)

Imagine instead you were fortunate enough to be farther from City Hall, driving across a bridge to Marin or the East Bay, shopping at Serramonte or Stonestown, at home in the Sunset or attending a game at Candlestick. The heat from the explosion and the instant burning of clothing would cause third-degree flash burns over much of the body for most people in this area, killing at least half. Brick and wood frame buildings would be destroyed. Vast firestorms could be caused by the intense heat, fanned by 160 mph winds. Such fires would suck up so much air that thousands could die from lack of oxygen. Even underground shelters, if there were any, would become ovens from the heat. Pressure from the blast would shatter glass and turn it into missiles traveling at over 100 mph. Almost all transportation of any kind would be destroyed or made useless. Emergency medical equipment and supplies would be destroyed.

If you were anywhere in the extended Bay Area (5.0 miles and beyond)

The intense light from the explosion could cause retinal damage and even blindness to those who see the blast. Among the wounded survivors, many could be deaf because of ruptured eardrums. For up to hundreds of miles away, depending upon wind patterns, the nature of the bomb, and other factors, radiation would kill many more. The radiation would be spread by tons and tons of contaminated soils and debris floating and drifting away from the blast area. The deaths may be rapid or slow. Radiation would also affect unborn generations because of its effects on genetic characteristics. For those of us who survive, the recovery would be long and painful, perhaps with permanent disability. The survivors may very well envy the dead.

What A Nuclear War Would Do

What we have just described are the effects of a single, one-megaton attack on San Francisco. The probability, however, is that an attack would not be limited to one bomb, nor to San Francisco, but rather would be a part of a full-scale attack on the United States.

In such an all out attack, over one-half of the population of the United States would be killed or injured. In the long run, millions more people would die from injuries, exposure to radiation, burns, and lack of food, water, or adequate shelter. The Bay Area as a financial center and with a higher than average concentration of military and industrial facilities, unquestionably would be a prime target.

With many hospitals destroyed and many doctors and nurses killed and injured, we would have almost no medical care and few facilities for the hundreds of thousands of people suffering from burns, radiation sickness, blast effects, shock, or other injuries. Epidemics of plague, typhus, cholera, or other diseases could break out. There would be hundreds of thousands of human corpses to dispose of in San Francisco alone.

Our economic structure would be devastated. There would be drastic food shortages with foodstuffs largely destroyed and little hope of replacing them quickly. With roads clogged or damaged, there would be a breakdown of transportation. Most communications would be cut off. Basic services such as fire, police, sanitation and water would be disrupted. There would be severe energy shortages. Because of lingering radiation, people would not be able to return to their homes for weeks, months or even years — that is, if their homes were left standing.

The Worst May Be Unknown

It is almost impossible to calculate the effects of a nuclear war on the environment. The oceans, air and land may be too contaminated to sustain life. Entire species of plants and animals may die out. Certain insects and bacteria which are more immune to radiation will multiply.

The effects on the minds of the people who witness this holocaust can only be guessed.

What Can We Do?

"I like to believe that people in the long run are going to do more to promote peace than are governments. Indeed, I think that people want peace so much that one of these days governments had better get out of their way and let them have it."

Dwight D. Eisenhower.

Neither the continued arms race, nor civil defense programs can banish the threat of a nuclear disaster. Being involved in the prevention of a nuclear holocaust is more realistic than trying to deny the danger. After reviewing these facts about nuclear war and nuclear weapons, the Mayor and the Board of Supervisors felt a responsibility to act. The first step was to endorse this booklet and have it distributed throughout San Francisco to inform you of the risks and dangers we all face.

Here are some steps you can take:

Learn More. There are lots of materials on nuclear weapons, nuclear war, and related issues available in our public libraries and at the offices of groups listed at the next section of this booklet.

Discuss the Problem. Engage in discussions with your family, friends, at your school, work, club or religious institution. Children too young to participate in activities to prevent nuclear disaster should have the support and reassurance, which the involvement of their parents can provide.

Contact Groups in Your Neighborhood. Offer to arrange for a speaker and film presentation on the nuclear weapons issue. The organizations listed here are delighted to help.

Vote Appropriately. Make sure those persons for whom you vote will do all in their power to promote peace and avoid nuclear war, and actively oppose the nuclear arms race.

Call and Write the News Media. Ask for coverage of the issue. Praise as well as criticize where indicated. The press needs and wants to hear from their viewers/readers.

Write Your Elected Officials Frequently. Elected representatives in Washington D.C. and Sacramento are YOUR voice. Make sure that your voice is heard! Jot two or three sentences on a postcard and urge them to support negotiations with the Soviet Union for an immediate, bilateral and verifiable nuclear weapons freeze and the reduction and elimination of nuclear stockpiles as well as opposition to the development and deployment of any new nuclear weaponry.

SAN FRANCISCO BOARD OF SUPERVISORS
RESOLUTION NO. 30

WHEREAS, It is the duty of elected officials at all levels of government to inform the people of any imminent danger and to take steps to prevent harm from occurring; and,

WHEREAS, The Mayor and the Board of Supervisors have formally adopted a Resolution calling for a "suspension of nuclear weapons production, while seeking a permanent, international nuclear weapons ban"; and,

WHEREAS, Most informed scientific and political experts agree that few, if any, people in San Francisco would survive a nuclear attack and that the only way to provide for survival is to prevent such an attack; and,

WHEREAS, The President has called for, not only increasing military spending at the expense of human services, the expenditure of millions of dollars to reactivate the archaic civil defense systems to prepare for a nuclear war and incident; and,

WHEREAS, Most authorities express doubts that there can be a "limited nuclear war"; and,

WHEREAS, Information received from the Mayor's Office of Emergency Services in a letter dated December 10, 1981 reveals that there is no adequate or realistic planning for a nuclear weapons disaster, and that none may be possible. The letter states in part,

"The City previously prepared a war contingency plan that focused, essentially, on the nuclear war environment. This plan is directed to the organization of local government and the period prior to a potential weapons exchange. The concept, under this plan, relies upon sheltering the City's population in designated fallout shelters. These shelters in the main, are not blast proof; therefore a mode of positive protection in the event of an exchange is not available at this time. The availability and use of these shelters rely upon the recognition of previously signed shelter use licenses and cooperation of the private sector parties who signed the license agreements.

Federal studies have concluded that construction of blast proof shelters would be in the millions of dollar category. Because of this fact, higher level government has directed counties, or equivalent jurisdictions nationwide, to prepare plans for general evacuation of risk areas. The San Francisco Bay Area has been designated as a risk area, and the residents of San Francisco have been assigned to evacuate to the North Coast Counties of Sonoma, Mendocino, Lake Humboldt and Del Norte. The planning effort to accomplish this movement is currently being developed in concert with the Federal Emergency Management Agency, State Office of Emergency Services and the noted counties"; and,

WHEREAS, The people of San Francisco must be intelligently informed of the effect of the detonation of a nuclear bomb on San Francisco and the Bay Area in order to communicate with leaders in Washington and Sacramento that our survival depends on world nuclear disarmament — to add their voices to this most significant of issues; now, therefore, be it

RESOLVED, That the Board of Supervisors direct the appropriate committee to hold hearings to adopt the booklet prepared by San Franciscans for Nuclear Weapons Education, to determine the most effective method of disseminating the information on the effects of nuclear war in San Francisco contained in it, and to determine what local government and the people can do to assure that there will be no nuclear war on this planet; and be it

FURTHER RESOLVED, That the committee will report its findings and recommendations to the Board for further legislative and appropriate action; and, be it

FURTHER RESOLVED, That copies of this Resolution will be distributed to the Mayor, the Mayor's Office of Emergency Services, the Department of Public Health and to our Representatives in Sacramento and Washington, D.C.
